

SESHASAYI RANGARAJ

Sunnyvale, CA | (765) 412-7539 | seshasayi.rangaraj@gmail.com | [LinkedIn](#)

PROFILE

Engineering Management professional with 5+ years of experience delivering enterprise SaaS platforms and complex technical programs. Strong at translating infrastructure-level systems into clear execution plans across engineering and product teams. Former engineering lead at Oracle. Technical Program Manager Intern on the Megapack Firmware team at Tesla, seeking Fulltime TPM roles supporting large-scale, cross-functional software systems.

EDUCATION

M.S in Engineering Management, Purdue University, West Lafayette, IN **Expected Graduation: May 2027**
Coursework: Technical Product Management, Strategic Management, Project Management, Executive Presence & Influence
B-Tech Electronics and Communications, National Institute of Technology (NITT), Tiruchirappalli, India **Aug'16-Aug'20**
Coursework: Probability and Statistics, Real Analysis, Design and Analysis of Experiments; Minor in Management studies

PROFESSIONAL EXPERIENCE

Tesla, Palo Alto, CA **Jan'26-Dec'26**

Technical Program Manager Intern, Firmware

- Quantified \$13.5M in manufacturing quality losses across 22,500+ Megapack units, directly driving deployment of One Vision, a computer vision system now autonomously detecting quality defects on the factory production line in real time.
- Drove pricing and go-to-market strategy for Tesla Powerwall 2 Asset buyback program, optimizing recovery value for key clients
- Productized an AI-driven workflow on Tesla's Nova platform querying real-time thermal telemetry across 79 battery packs, delivering automated fan speed analytics to industrial stakeholders.

Oracle Corporation, Bangalore, India

Sep'20-July'25

Senior Member of Technical Staff

Sep'22-July'25

- Led programs that integrated agentic AI capabilities into production systems to improve deployment speed by 70 percent and provide clearer lifecycle visibility for thousands of enterprise environments
- Partnered with clinicians and product teams to identify workflow failure points, launching an AI-assisted solution that reduced operational friction by 35 percent and improved day-to-day productivity for 10,000 users
- Delivered a cross-platform integration initiative that generated \$250M efficiency gains by aligning engineering, security, and deployment teams and scaling the platform footprint by 300 percent
- Built real-time observability dashboards that monitored performance, adoption, and fleet behavior, improving program decision-making by 30 percent and unlocking \$720M in annual productivity gains

Member of Technical Staff

Sep'20-Sept'22

- Managed executive-level escalations by diagnosing system issues, driving cross-functional alignment, and reducing downtime by 65 percent, improving customer NPS by 10 percent
- Co-patented a load-balancing and rate-limiting mechanism that mitigated system vulnerabilities and delivered \$4M in annual operational savings
- Reduced compliance and security risk by 60 percent by designing controlled rollout systems using feature flags for high-sensitivity deployments

ACADEMIC RESEARCH AND PROJECTS

Megapack Firmware Lifecycle Console:

October'25-Present

- Designed a console visualizing the end-to-end Megapack firmware lifecycle, integrating validation, pilot analytics, and AI insights to streamline cross-functional firmware coordination. [View Project →](#)

SOA to OIC Migration Platform, Oracle AI World, Las Vegas

Apr'25-Jul'25

- Coordinated PM, UI/UX teams to develop agent-based migration solution for legacy SOA customers, delivered proof-of-concept in 4 months enabling seamless transition from legacy SOA Composer workflows to modern OIC platform, targeting 4,000+ customers

Research Associate, National University of Singapore, Singapore

May'19-Aug'20

- Collaborated with world-renowned neurosurgeons, anesthesiologists, and medical imaging specialists at NUS to drive a high-impact biomed-AI project on **Intracerebral Hemorrhage (ICH) detection**, published in [Medical & Biological Engineering & Computing](#)

TECHNICAL SKILLS

Program Skills: Agile, Product Roadmap, Scrum, Technical Documentation, GTM, System Validation, Stakeholder Management

Engineering Technologies: Claude code, Jira, Confluence, MS Project, MS PPT, Figma, Grafana, Postman, Docker, Kubernetes, Jupyter

Analytics Tools: PowerBI, Tableau, Github Projects, Lucidchart, Jira, Microsoft Project, Smartsheet, Notion, Gantt

Programming Languages: SQL, Python, Java, YAML, Javascript, C++, Shell Scripting
